COMP9020 20T1

Week 5 Problem Set
Graphs and Trees

Foundations of Computer Science

1. (Graph properties)

   True or false?

   a. The complete bipartite graph $K_{5,5}$ has no cycle of length five.

   b. If you add a new edge to a cycle, the resulting graph will always contain a 3-clique.

   c. It is possible to remove two edges from K_6 so that the resulting graph has a clique number of 4.

   d. There are exactly 3 automorphisms of K_3.

2. (Graph traversal)

   For each of the following graphs, show a Hamiltonian path or argue why no such path exists.

   a. The graph on slide 18 (week 5).

   b. $K_{3,4}$

   c. $K_{1,4,1}$

   d. $K_{2,2,4}$

   e. A graph with 5 nodes and degree sequence 0, 0, 5.

   f. A tree with 5 nodes and degree sequence 0, 3, 1, 1.

3. (Graph colouring)

   For each of the following graphs G, determine its chromatic number $\chi(G)$.

   a. The graph on slide 18 (week 5).

   b. A graph obtained by adding one new edge to C_4.

   c. A graph obtained by removing one edge from $K_{2,2}$.

   d. A graph obtained by removing one edge from K_4.

4. (Planar graphs)

   True or false?

   a. A forest is always planar.

   b. All graphs with 6 nodes and 8 edges are planar.

   c. All graphs whose clique number is 2 are planar.

   d. You can obtain a nonplanar graph by adding 3 edges to a cycle.

   e. When you remove two edges from K_6, you will never obtain a planar graph.

f. All graphs whose chromatic number is 4 are planar.

5. (Constructing graphs)

A graph G is a 2-3 tree if:

- G is a rooted tree.
- Each node has either 2 or 3 children (unless it is a *leaf* node, which has no children).
- All paths from the root to the leaves have the same length.

There are seven different types of 2-3 trees of height 2 (i.e., which are non-isomorphic). Draw one tree of each type.

6. **Challenge Exercise**

a. What is the minimum number of edges that need to be removed from K_5 so that the resulting graph has a chromatic number of

- 3 ?
- 2 ?
- 1 ?

b. Give a planar drawing of $K_{2,2,2}$. Can you find one with only straight lines?

7. Mid-term practice test

To prepare for the mid-term online test on **Friday, 27 March, 2:30pm** go to COMP9020 20T1 Practice Test to see 3 sample questions.

Note:

- The practice test will automatically close 1 hour (60 minutes) after you have started it, just like the mid-term test will.
- The practice test will end on Thursday, 26 March, 10:00am. It will no longer be available afterwards.
- Your answers to the open questions will not be marked, but you will get to see sample solutions after the practice test has ended on Thursday.

Assessment

After you have solved the exercises, go to COMP9020 20T1 Quiz Week 5 to answer 4 quiz questions on this week's problem set (Exercises 1-5 only) and lecture.

The quiz is worth 2.5 marks.

There is no time limit on the quiz once you have started it, but the deadline for submitting your quiz answers is **Thursday, 26 March 10:00:00am**.

Please continue to respect the **quiz rules**:

Do …

- use your own best judgement to understand & solve a question
- discuss quizzes on the forum only **after** the deadline on Thursday

Do not …

- post specific questions about the quiz **before** the Thursday deadline
- agonise too much about a question that you find too difficult
